PROJECTS

Medicinal Plant Identification System (Microservices Based - Final Year Research Project)

- Built a microservices-based system using Docker to identify medicinal plants and provide Siddha medicine knowledge with multilingual support.
- Implemented using FastAPI, Flask, Node.js, PostgreSQL, and an existing ML model, with integration of OpenStreetMap API.

Portfolio CMS with CI/CD Deployment

- Built a portfolio CMS with an admin panel to update website content using JavaScript.
- Used GitHub token-based automation to push updates from the admin panel to GitHub and automatic deployment.

Book Store Web Application (MERN Stack)

- Developed a full-stack web application with CRUD features, authentication, and REST APIs using the MERN stack.
- Built a responsive frontend with React to ensure smooth user experience across different devices.

Responsive Job Portal Website (MERN Stack)

- Built a job portal with filtering, pagination, and user authentication including email and Google login.
- Designed a responsive interface using Tailwind CSS for better usability on mobile and desktop.
